

Photochemistry Frontier Reports in 2026

Contents	Authors
1. Fundamentals of Photochemistry	
1. Measurement and Evaluation of Photochemical Processes	Hiroshi Miyasaka
1. Transient Absorption Measurements	Hiroshi Miyasaka
2. Transient Absorption Spectroscopy of Solid Materials	Akihiro Furube
3. Transient Raman Spectroscopy	
4. Photoacoustic Methods	
5. Thermal Lens Methods	
6. Single-Molecule Spectroscopy	Sadahiro Masuo
7. Time-Resolved X-ray Measurements (Scattering and Spectroscopy)	Shunsuke Nozawa
8. Time-Resolved Infrared Spectroscopy	Ken Onda
9. Time-Resolved ESR Spectroscopy	Yasuhiro Kobori
10. Time-Resolved Microspectroscopy	Takashi Tachikawa
11. Optical Tweezers	Yasuyuki Tsuboi
12. Surface-Enhanced Raman Spectroscopy (SERS)	Tamitake Itoh
13. Attosecond Science	Hiromichi Niikura
14. Computational Chemistry	Miho Hatanaka
2. Excited State Electronic Structure	
1. Organic Molecules	Yasunori Matsui, Hiroshi Ikeda
2. Metal Complexes	Koichi Nozaki
3. Metal Nanoclusters	Tatsuya Higaki
4. Metal Nanoparticles	Tetsu Tatsuma
3. Excited-State Molecular Structures	
4. Primary Process of Excited State	
1. Photoinduced Electron Transfer Processes	Hiroshi Miyasaka
2. Hydrogen Bonding Interactions in the Excited States	Haruo Inoue
3. Relaxation Process	Hiroshi Miyasaka
4. Triplet-Triplet Annihilation Photon Upconversion, and Singlet Fission	Nobuhiro Yanai, Yasuhiro Kobori
5. Optical Microcavities	Kosei Ueno
5. Laser Photochemistry	
1. Ablation	
2. High-Intensity Laser Chemistry	
3. X-Ray Transient Diffraction/Phase Transition	
4. Infrared Laser Chemistry	Satoshi Ashihara
5. Application of Multiphoton Absorption and Multiple Excitation	Hiroshi Miyasaka
6. Molecular Photoreaction	
1. Organic Photoreactions	Manabu Abe
2. Photochemistry of Porphyrins and Phthalocyanines	Kazuyuki Ishii
7. Reaction Intermediates	
1. Organic Photoreactions Involving Radicals, Biradicals, and Radical Ions	Manabu Abe
2. Pioneering of Photoreactions by Electron Transfer and Photoinduced Electron Transfer	Yasuharu Yoshimi
8. Photoreaction field	
1. Photoreactions in Molecular Assembly Environments and Dendrimers	
2. Photochemistry of Supramolecular Systems	Takehiko Wada
3. Interfacial Photochemistry	
4. Photochemical Reactions in Organic and Inorganic Composites	Shinsuke Takagi
5. Photochemical Reactions in the Solid State	Hideko Koshima
6. Asymmetric Photochemistry	Tadashi Mori
9. Visible Light Photochemistry	
10. Photochemistry of Metal Complexes	
11. Photolife Science	
1. Photosynthetic Reaction Center Complexes	Jian-Ren Shen
2. Light-Harvesting Systems	Hitoshi Tamiaki
3. DNA Photochemistry	Kiyohiko Kawai
4. Photochemistry of Visual Pigments	
5. Medical and Healthcare Applications of Photochemistry	Kazutaka Hirakawa, Hiroaki Horiuchi
6. Near-Infrared Photoimmunotherapy	Mikako Ogawa
7. Biological Luminescent Probes	Toshitada Yoshihara
8. Protein Crystallization	Teruki Sugiyama

2. Application of Photochemistry		
1. Photocatalysis		
1. Water Splitting		Akihiko Kudo
2. Photochemical Hydrogen Production		Akihiko Kudo
3. Photo-Induced hydrophilicity		
2. Light Energy Conversion		Haruo Inoue
1. Artificial Photosynthesis		Akihiko Kudo, Osamu Ishitani, Haruo Inoue
2. Water Oxidation Reaction		Haruo Inoue
3. Perovskite Solar Cells		Tsutomu Miyasaka
4. Dye-Sensitized Solar Cells		Masashi Ikegami
5. Organic Photovoltaics		Tomokazu Umeyama
6. Photocatalytic CO ₂ Reduction		Osamu Ishitani, Akihiko Kudo
7. Photo-Nitrogen Reduction Reaction		Tomoya Oshikiri
8. Photochemistry of Semiconductors		Kazuhiko Maeda, Ryu Abe
9. Photobiological Fuel Production		Kazuhito Inoue
3. Photonics		
1. Ultra-Fine Processing		
2. Photonic Band		
4. Plasmon Chemistry		Hiroaki Misawa
1. Plasmon-Induced Charge Separation		Tetsu Tatsuma
2. Plasmon-Induced Chemical Reactions		Kosei Ueno
3. Surface Plasmon Resonance Sensor		Keiko Tawa
4. Plasmon-Mediated Excitation		Kei Murakoshi
5. Photofunctional Materials		Seiya Kobatake
1. Optical Recording Material, Heat Mode, and Photon Mode		
2. Optical Recording Dyes		
3. Organic EL		Chihaya Adachi
4. Design of Luminescent Molecules by Theoretical Calculations		Naofumi Nakayama
5. Electrochemical Imaging (Electrochromism and Electrochemiluminescence)		Kazuki Nakamura
6. Organic Photochromic Materials		Jiro Abe
7. Inorganic Photochromic Materials		
8. Photoinduced Morphological Change and Surface Relief		Shusaku Nagano
9. Conversion to Mechanical Energy		Tomiki Ikeda, Toru Ube
10. Photomechanical Crystal Materials		Hideko Koshima
11. Force-Sensitive Luminescent Probes		Shohei Saito
12. Photomagnetic Materials		Shin-ichi Ohkoshi
13. Magneto-Optical Materials		Yuichi Kitagawa
14. Vapochromic Materials		Masako Kato
15. Mechanochromic Materials		Suguru Ito
16. Photodetectors		Ayumi Ishii
17. Organic Chiral Materials		Takashi Hirose
18. Inorganic Chiral Materials		Ayumi Ishii
19. Photoacid Generators		Tsumoru Morimoto, Tsuyoshi Kawai
20. Light-Resistant Materials		
6. Luminescent Materials		Seiya Kobatake
1. Thermally Activated Delayed Fluorescence (TADF)		Chihaya Adachi
2. Photon Upconversion Materials		Kenji Kamada
3. Metal Complexes & Rare Earth Complexes		Masako Kato
4. Quantum Dots and Semiconductor Nanoparticles		Tsukasa Torimoto
5. Room-Temperature Phosphorescent Materials		Shuzo Hirata
6. Supramolecular Luminescent Materials		Shiki Yagai
7. Aggregation-Induced Emission		Kazuo Tanaka
8. Circularly Polarized Luminescence		Junpei Yuasa
9. Magnetic Circularly Polarized Luminescence Materials		Yoshitane Imai
10. Chemiluminescence		Takashi Hirano
11. Bioluminescence		Takashi Hirano
12. Fluorescent Dyes for Super-Resolution Imaging		Masakazu Morimoto
7. Environmentally Friendly Photochemistry		
1. Photochemistry for Environmental Remediation		
2. Visible Light Sterilization		
3. Material Production Using Microchannels		Takuya Ogaki, Hiroshi Ikeda
